Docket No.: 17974 Examiner: Ahn, Sam K.

TC/A.U. 2611

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the

application.

Listing of Claims:

1. (Currently Amended) A method for electromagnetic processing of an input wave

comprising the steps of:

receiving a modified signal derived from two or more signals that represent said

input wave when combined; and

regulating said modified signal using a plurality of segments and a digital signal

containing at least one characteristic of said two or more signals.

2. (Original) A method as in claim 1, wherein said two or more signals are in

quadrature with each other.

3. (Original) A method as in claim 1, wherein said characteristic used to regulate

said modified signal is magnitude.

4. (Original) A method as in claim 1, further comprising the step of generating an

output signal from said regulation of said modified signal.

Appl. No. 10/606,080 Docket No.: 17974
Response Dated July 2, 2007 Examiner: Ahn. Sam K.

Reply to Office Action of April 2, 2007 TC/A.U. 2611

(Canceled).

6. (Original) A method as in claim 5, wherein one or more of said segments is

independently controlled as a power amplifier by a portion of said two or more signals

that represent said input wave to contribute power to an output signal.

7. A method as in claim 6, further comprising the step of generating an output signal

by combining power outputted from one or more of said segments.

8. (Original) A method as in claim 7, wherein said step of generating an output

signal by combining power is accomplished using one or more selected from the group

consisting of power transformers, quarter-wave transmission lines, discrete LC

components, and a Pi-networks.

9. (Currently Amended) A method as in claim 5, wherein one or more of said

segments is independently controlled as a current source by said portion of said two or

more signals that represent said input wave to contribute current to an output signal.

10. (Original) A method as in claim 1, wherein said received modified signal

contains only one of said two or more signals used to derive said modified signal.

Appl. No. 10/606,080

Response Dated July 2, 2007

Reply to Office Action of April 2, 2007

Docket No.: 17974 Examiner: Ahn, Sam K. TC/A.U. 2611

11. (Original) A method as in claim 1, wherein said received modified signal is

derived from a sign characteristic of at least one of said two or more signals that represent

said input wave when combined.

12. (Original) A method as in claim 1, wherein said modified signal is a carrier wave

modulated by a characteristic of at least one of said two or more signals that represent

said input wave when combined.

13. (Original) A method as in claim 1, further comprising the step of generating said

modified signal.

14. (Original) A method as in claim 13, wherein said step of generating said

modified signal comprises phase shifting a carrier wave to generate a phase shifted

carrier wave, mixing a characteristic of one of said two or more signals that represent said

input wave when combined with said carrier wave, and mixing a characteristic of another

of said two or more signals that represent said input wave when combined with said

phase shifted carrier wave.

15. (Original) A method as in claim 14, wherein said carrier wave and said phase

shifted carrier wave have a relative phase difference of 90°.

16. (Original) A method as in claim 1, further comprising the step of generating said

two or more signals that represent said input wave when combined.

Examiner: Ahn, Sam K.

TC/A.U. 2611

17. (Original) A method as in claim 16, further comprising the step of processing one

or more of said two or more signals that represent said input wave when combined.

18. (Original) A method as in claim 17, wherein said step of processing comprises

one or more selected from the group consisting of performing correction of an amplitude

characteristic of a carrier wave used in said derivation of said modified signal, correction

of a phase characteristic of a carrier wave used in said derivation of said modified signal,

and filtering of one or more of said two or more signals that represent said input wave

when combined.

19. (Original) A method as in claim 1, wherein said electromagnetic processing of

said input wave comprises RF modulation.

20. (Original) A method as in claim 1, wherein said step of regulating said modified

signal comprises:

regulating said modified signal using a digital control signal from one of said two

or more signals that represent said input wave when combined to generate at least one

output signal component;

regulating said modified signal using a digital control signal from another of said

two or more signals that represent said input wave when combined to generate at least

one other output signal component; and

TC/A.U. 2611

combining said at least one output signal component with said at least one other output signal component to generate an output signal.

21. (Original) A method for transmitting an input wave comprising the steps of:

generating two or more signals that represent said input wave when combined;

modulating a carrier wave with at least one characteristic of at least one of said two or more digital signals to generate a modulated signal;

modulating a phase shifted carrier wave with a characteristic of another of said two or more digital signals to generate a phase shifted modulated signal;

inputting said modulated signal and said phase shifted modulated signal into an amplifier having at least two amplifying segments;

controlling at least one of said amplifying segments with a digital control signal containing a characteristic of one of said two or more signals that represent said input wave when combined to generate at least one segment output;

controlling at least another of said amplifying segments with another digital control signal containing a characteristic of another of said two or more digital signals that represent said input wave when combined to generate at least one segment output;

transmitting an output signal based upon said at least one segment output.

22. (Original) The method of claim 21, wherein said two or more signals comprise an in-phase and a quadrature signal.

Response Dated July 2, 2007

Reply to Office Action of April 2, 2007

Docket No.: 17974 Examiner: Ahn, Sam K.

TC/A.U. 2611

23. (Original) The method of claim 21, wherein said characteristic used to generate

said digital control signals is magnitude.

24. (Original) The method of claim 21, wherein said characteristic used to modulate

said carrier wave is sign.

(Original) The method of claim 22, wherein said carrier wave is an RF signal.

26. (Original) The method of claim 22, wherein said segment amplifies power.

27. (Original) The method of claim 22, wherein said segment is a current source.

28. (Original) An apparatus for electromagnetic processing of an input wave

comprising:

an amplifier having at least two amplifying segments for receiving a modified

signal derived from two or more signals that represent said input wave when combined;

and

a control circuit for regulating said modified signal across one amplifying

segment using a digital signal containing a characteristic of one of said two or more

signals, and for regulating said modified signal across another of said amplifying

segments using a digital signal containing a characteristic of another of said two or more

signals.

29. (Original) An apparatus as in claim 28, wherein said two or more signals are in

quadrature with each other.

30. (Original) An apparatus as in claim 28, wherein said characteristic used to

regulate said modified signal is magnitude.

31. (Original) An apparatus as in claim 28, further comprising an output circuit for

generating an output signal from said regulation of said modified signal.

32. (Original) An apparatus as in claim 28, wherein one or more of said segments

comprises a power amplifier.

33. (Original) An apparatus as in claim 32, further comprising a combining circuit

for combining an output from one or more of said segments, wherein said combining

circuit comprises one or more selected from the group consisting of power transformers,

quarter-wave transmission lines, discrete LC components, and a Pi-networks.

Appl. No. 10/606,080 Response Dated July 2, 2007 Examiner: Ahn, Sam K.

34. (Original) An apparatus as in claim 28, wherein one or more of said segments is a

Docket No.: 17974

TC/A.U. 2611

current source that contributes current to an output signal.

35. (Original) An apparatus as in claim 28, wherein said received modified signal

contains only one of said two or more signals used to derive said modified signal.

36. (Original) An apparatus as in claim 28, further comprising:

a source of a carrier wave;

a phase shifter for phase shifting said carrier wave to generate a phase shifted

carrier wave:

a mixer for mixing a characteristic of one of said two or more signals that

represent said input wave when combined with said carrier wave; and

another mixer for mixing a characteristic of another of said two or more signals

that represent said input wave when combined with said phase shifted carrier wave.

37. (Original) An apparatus as in claim 36, wherein said carrier wave is an RF signal.

38. (Original) An apparatus as in claim 36, wherein said carrier wave and said phase

shifted carrier wave have a relative phase difference of 90°.

39. (Original) An apparatus as in claim 28, further comprising a signal generator for

generating said two or more signals that represent said input wave when combined.

40. (Original) An apparatus as in claim 39, further comprising a signal processor for processing one or more of said two or more signals that represent said input wave when combined.

41. (Original) An apparatus as in claim 40, wherein said signal processor is programmed to do one or more selected from the group consisting of performing correction of an amplitude characteristic of a carrier wave used in said derivation of said modified signal, correction of a phase characteristic of a carrier wave used in said derivation of said modified signal, and filtering of one or more of said two or more signals that represent said input wave when combined.

42. (Original) An apparatus for transmitting an input wave comprising:

a signal generator for generating two or more signals that represent said input wave when combined;

a signal modulator for modulating a carrier wave with a characteristic of at least one of said two or more signals to generate a modulated signal and for modulating a phase shifted carrier wave with a characteristic of another of said two or more signals to generate a phase shifted modulated signal;

an amplifier having at least one amplifying segment for receiving said modulated signal and at least one other amplifying segment for receiving said phase shifted modulated signal;

Reply to Office Action of April 2, 2007

Docket No.: 17974 Examiner: Ahn, Sam K. TC/A.U. 2611

a controller for controlling said at least one amplifying segment with a digital

signal containing a characteristic of one of said two or more signals and for controlling

said at least one other amplifying segment with an digital signal containing a

characteristic of another of said two or more signals to generate at least one segment

output; and

an output circuit for transmitting an output signal based upon said at least one

output segment.

43. (Original) The apparatus of claim 42, wherein said two or more signals comprise

an in-phase and a quadrature signal.

44. (Original) The apparatus of claim 42, wherein said characteristic used to generate

said control signal is magnitude.

45. (Original) The apparatus of claim 42, wherein said characteristic used to

modulate said carrier wave is sign.

46. (Original) The apparatus of claim 42, wherein said carrier wave is an RF signal.

47. (Original) The apparatus of claim 42, wherein said segment is a power amplifier.

Appl. No. 10/606,080 Response Dated July 2, 2007 Reply to Office Action of April 2, 2007 Docket No.: 17974 Examiner: Ahn, Sam K. TC/A.U. 2611

48. (Original) The apparatus of claim 42, wherein said segment is a current source.
